Dear Sir

In sending you this case I feel I must write an explanatory note.

You will see from the chart that he has been in this hospital for 6½ months during which time he has had unexplained fever at one time suggesting meningitis at another Septicaemia. He has been treated with Salicylate, Quinine etc + has had salvarsan injected intra-venously.

date, although there has been no history of any urethral trouble, I have massaged his urethra + taken some of the fluid from the meatus. This though not of vis pur, contained many polymorphonuclear cells. No Gonococci have been seen here on my examination.

3076

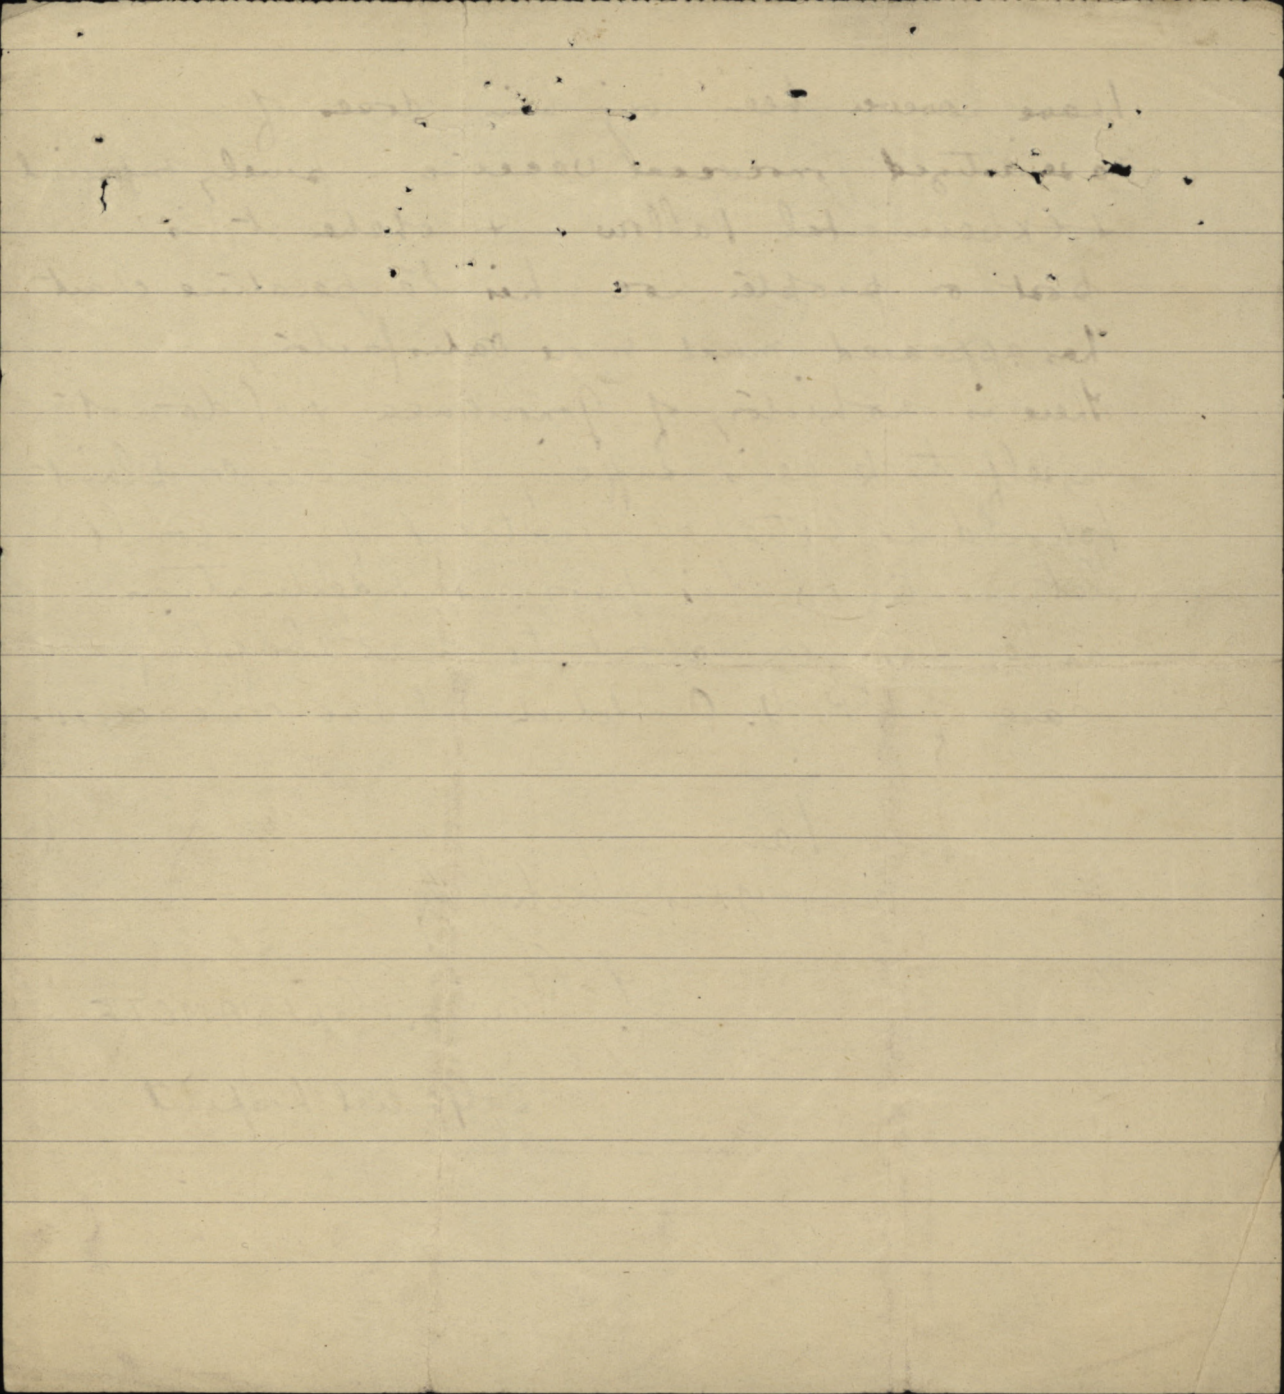

I have however been giving him doses of
a serientized gonococcal vaccine - purely empirical
& experimental I allow - & whether it is
best or proper how his temperature chart
has appeared much more satisfactory
There is no history of Gonorrhoea & I do not
myself think he is suffering from this complaint -
I should be extremely grateful if you would
let me know his progress & destination
as he has been about the most baffling
case of P. U. O. which I have come across.

I am

yours faithfully -

J. Clayton. Capt R.A.M.C.T.F.
